

SELF ADJUSTING WIRE STRIPPERS

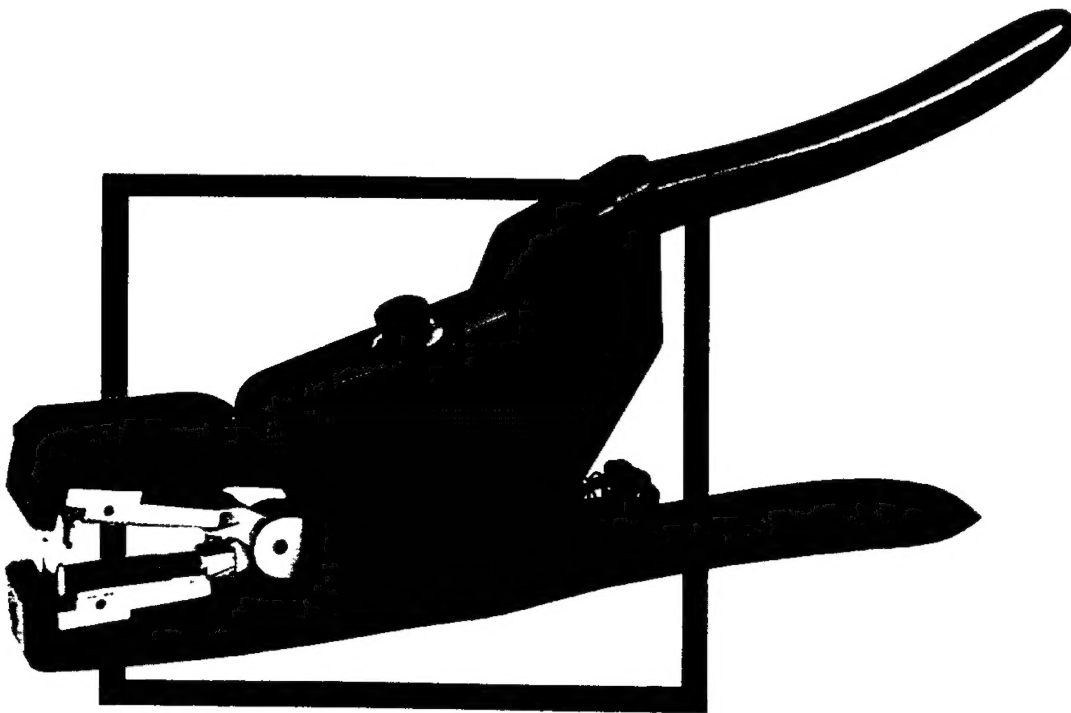

The Megastrip is the only hand tool in the world capable of performing faultless stripping operations on electrical wires and cables with insulations of PVC, Vinyl, Polyethelene etc. from 1.0-16mm². Furthermore, the Megastrip will also handle multi-core cables up to 10mmØ, it will remove the outer insulating jacket and with one simple twist of the gauge selector, be ready to strip the inner cores.

The Megastrip has primarily been designed to meet the heavy usage requirements of electrical installation engineers. The tool is of aluminium alloy construction combining the properties of both strength and lightness. The slim frontal jaw entry ensures easy access to wiring in confined spaces such as junction boxes, switch or fuse boxes etc., and the toughened steel stripping jaw assembly ensures precision stripping of all PVC coated round wires and cables normally encountered in field, domestic and factory wiring installations.
